

## Standards Compliant Web Browsers

We design Standards Compliant Web Site content. To view this site without any problems you need a decent browser. If you are still using Internet Explorer, go outside and slap yourself a bit.

Finished? Excellent, you deserved it. Quite apart from the fact that Internet Explorer is the most buggy, security-hole ridden browser to ever be installed, using it has one big problem when designing to web standards.

The best way to view standards compliant web sites is to download a standards compliant web site browser. Click the link below to download Firefox.

<http://www.mozilla.com/firefox/>
